PREFACE

This publication provides a comprehensive account of the commodity flows between Cyprus and its trading partner countries for January 2022. It includes detailed quantity and value data on imports and exports of domestically produced goods and foreign goods classified by commodity (extended at the 6th digit level) and by EU and non-EU subtotals.

The statistics of trade with non-EU countries (extra-EU trade) are compiled mainly from "THESEAS" system, the computerized system of customs authority for imports and the customs exports computerized system. The statistics of trade with EU countries (intra-EU trade) are compiled mainly via the Intrastat system and the data collected via the VAT returns.

With regards to the commodity classification used in this publication, this is based on subheadings (6th digit commodity code) of Harmonised Commodity Description and Coding System (HS) which is published and maintained by the Brussels based World Customs Organization.

This report was prepared by Mrs. I. Leontiou, Statistics Officer under the guidance of Mr. S. Vikis, Senior Statistics Officer and the general supervision of Mr. Pantelis Protopapas, Head of the Business, Energy, Environment, Agriculture, Science and Technology and Foreign Trade Statistics Division.

The valuable cooperation of the Department of Customs and Excise and the Tax Department is acknowledged.

EXPLANATORY NOTES

The data for 1974 onwards refer only to merchandise imports and exports from ports and airports in the Government controlled areas.

1. Data sources

Since the accession of Cyprus to EU in May 2004, major changes were brought to external trade data. Trade statistics with EU Member States and trade statistics with non-EU countries are compiled mainly from two separate sources. This was the consequence of the abolition of custom formalities between EU Member States, which had served as the traditional source of trade statistics, and the introduction of a new data collection system called Intrastat. Customs declarations, the traditional source of almost all trade statistics, were no longer required for most movements of goods within the EU. A new EU wide system for collecting intra-EU trade statistics, Intrastat, was introduced in May 2004 for the compilation of statistics on trade in goods between EU Member States. From January 2022, with the application of the Regulation (EU) 2019/2152, the European Union set up a new system of monthly micro data exchange between Member States of their intra-EU exports, enabling by this way the use of an additional data source for the compilation of intra-EU trade statistics.

The introduction of Intrastat as from May 2004 brought about a methodological break with the past. Intra-EU trade statistics were compiled using the information extracted mainly from two sources. The first one was the Intrastat system, in which traders submitted detailed monthly returns giving information to the competent national authority on intra-EU imports and/or intra-EU exports of goods with EU Member States. The second main source for the collection of intra-EU trade statistics was the VAT return, on which all traders were required to record the total value of goods imported from and exported to other EU Member States. The information provided on the VAT returns was necessary for the collection of data on intra-EU trade for those traders below the Intrastat thresholds, for maintaining the Intrastat trader´s register and for identifying those traders exceeding the thresholds who were required to submit the detailed Intrastat return. As from January 2022, with the application of Regulation (EU) 2019/2152, the Member States are more flexible in choosing the data sources for the compilation of intra-EU trade statistics.

The legal framework for intra-EU trade statistics is the national Intrastat Law of 2004 relating to the statistics on the trading of goods between Member States (Law 38(I)/2004), as well as the corresponding EU regulations.

The statistics on the trade of goods with non-EU countries are compiled mainly from the computerized systems of the customs authority for imports (“Theseas” system) and for exports. As from January 2022, with the application of Regulation (EU) 2019/2152, the Member States exchange on a monthly basis data for imports and exports with Third Countries where relevant (centralized clearance and quasi exports data), Moreover, Member States make use of the data relating to centralized clearance in their compilation process of extra-EU trade statistics.

2. Responsibility for data collection, compilation and publication

The TAX Department is responsible for collection of intra-EU trade data via the Intrastat system and maintenance of the Intrastat register. From 1st of July 2012, Intrastat returns are submitted by traders only in electronic format (web declarations).

The Statistical Service is responsible for quality controls (e.g. validity and credibility checks), estimations for all traders who have not been included (Intrastat non-responders and traders below the Intrastat exception thresholds), compilation and dissemination of intra-EU trade statistics.

For extra-EU trade, the majority of data are collected by the customs authorities through “Theseas” computerized system for imports and the customs exports computerized system. The Statistical Service performs quality checks, compilation and dissemination of extra-EU trade statistics.

Other administrative sources of information are utilized in the compilation process of international trade in goods statistics such as data from Shipping Deputy Ministry, Civil Aviation Department and international database for vessels. For special categories of goods such as vessels, a direct collection of data via a special survey is carried out by Statistical Service.

3. Exclusions

4. Thresholds

- ***Extra-EU trade threshold***

Through the application of the threshold system, extra-EU trade statistics do not cover imports and exports whose value is lower than the customs threshold.

- ***Intra-EU trade threshold***

Through the application of the threshold system, intra-EU trade statistical data are collected from any taxable person whose value of trade is considered to be above the threshold level of €230.000 for intra-EU imports and €75.000 for intra-EU exports for the year 2022. Below threshold data are collected via VAT declarations.

The value of trade of the parties responsible for providing information is considered to be above the thresholds when the value of trade with other EU Member States during the previous year exceeds the applicable threshold, or when the cumulative value of trade with other EU Member States since the beginning of the year of application exceeds the applicable threshold, separately for each trade flow.

5. Intrastat estimation

The figures include value and volume estimates for traders above the Intrastat thresholds who did not make Intrastat returns and for the trade below the exemption threshold. Estimates are assigned to partner country and commodity at detailed level.

6. Country Classification

The classification of countries is based on the nomenclature of countries and territories, as set out in the Commission Implementing Regulation (EU) 2020/1470. From January 1999, the United Nations ISO alpha-2 coding system is followed, in which each country is identified by a two-letter code.

7. Partner Country

In this publication, **intra-EU exports** and **extra-EU exports** are classified by the Member State and country of final destination of the goods, respectively. The last country to which the goods are specifically directed on their outward movement from the reporting country is regarded as their final destination. This is not necessarily the country in which the good will be unshipped or that in which they will be finally consumed.

For **extra-EU imports**, the trading partner is the country of origin. In general, goods obtained entirely from a given country originate in that country. A product in the production of which two or more countries were involved, is considered as originating in the country in which the last substantial transformation or processing took place. Packing, repacking and sorting are not regarded as manufacturing processes.

For **intra-EU imports**, the trading partner is the Member State of consignment of the goods. This is the Member State from which the goods were dispatched without halt or legal formality in another country apart from any transport reasons. Conversely, if there was such an operation in another country, that country becomes the Member State of consignment.

The United Kingdom is considered as an extra-EU partner country for the EU. Imports from the United Kingdom are recorded by country of consignment until the end of the transitory period (31 December 2020). As of January 2021 onwards, data on trade with the United Kingdom is based on a mixed concept. In application of the Withdrawal Agreement Protocol on Ireland / Northern Ireland, for trade with Northern Ireland the statistical concepts applicable are the same as those for trade between Member States (imports are recorded by country of consignment) while for trade with the United Kingdom (excluding Northern Ireland) the same statistical concepts are applicable as for trade with any other extra-EU partner country (imports are recorded by country of origin). For these reasons data on trade with the United Kingdom are not fully comparable with data on trade with other extra-EU trade partners, and for reference periods before and after the end of 2020.

8. Commodity Classification

The commodity classification is based on the Harmonised Commodity Description and Coding System (HS) or more simply the Harmonised System or HS (6 digits level) and includes more than 5.000 six-digit codes.

The Harmonised System is a legal instrument and was adopted by the Customs Co-operation Council (now the World Customs Organisation) in June 1983 and the International Convention on the Harmonised System (HS Convention) entered into force on the 1st January 1988. The HS is a nomenclature comprising of headings and sub-headings and their related numerical codes, sections, chapters as well as notes and general rules for its interpretation.

Most detailed results are available by the sub-headings of the Combined Nomenclature (CN), which includes nearly 10.000 eight-digit codes.

The structure of the HS and the CN classifications (for the reference year 2022) is illustrated in the following table:

Nomenclature	Levels of breakdown	Code	Number
Harmonised System (HS)	Section	One digit	21
	Chapter	Two digits	98
	Heading	Four digits	1233
	Sub-Heading	Six digits	5621
Combined Nomenclature (CN)	Sub-Heading	Eight digits	9736

9. Recording system

- ***Extra- EU trade***

For the purpose of this publication, the general trade system is recorded for the trade with non-EU countries. Under it, the recorded aggregates include goods entering or leaving the economic territory of Cyprus with the exception of simple transit trade or transshipment of goods. Quasi transit trade is included in general imports and exports statistics. In particular, goods which are received into customs warehouses are recorded as imports at that stage, whether or not they subsequently go into free circulation in Cyprus. Similarly, outgoing goods from customs warehouses are recorded as exports at the time they leave Cyprus. Furthermore, goods that go or leave directly into/from local market are included.

- ***Intra- EU trade***

The Intrastat system is based on the concept of movement of goods between Member States. Accordingly, it is applied to the union goods which move from one Member State to another. As such, intra-EU trade statistics record the imports and exports of all movable property recorded by each Member State.

Intra-EU imports include:

(i) Union goods, except goods which are in transit between Member States;

(ii) non-Union goods formerly placed in the Member State of export under the inward processing customs procedure, which are maintained under the inward processing customs procedure or released for free circulation in the Member State of import.

(iii) Some goods movements are included in statistics based on specific conditions e.g. aircraft and ships whose economic ownership has been transferred from a person established in another Member State to a person established in Cyprus are included in intra-EU imports statistics.

Intra-EU exports include:

(i) Union goods, except goods which are in transit between Member States;
(ii) non-Union goods placed in the Member State of export under the inward processing customs procedure.
(iii) Some goods movements are included in statistics based on specific conditions e.g. aircraft and ships whose economic ownership has been transferred from a person established in Cyprus to a person established in another Member State are included in intra-EU exports statistics.

Statistics do not cover goods in transit that is goods that are merely passing across a Member State, by any means of transport, but are not stored there for any other but transport reasons.

10. Domestic and foreign goods

Domestic goods are goods originating in the economic territory of Cyprus; if they have been wholly obtained in it or were substantially transformed by processing in it, so that the processing confers domestic origin. Goods originally imported and having undergone only repair or minor operations which leave them essentially unchanged are not defined as domestic. Minor operations include packaging, bottling, cleaning, sorting etc.

Foreign goods are goods originating in the rest of the world, i.e. not produced in the economic territory of Cyprus and compensating goods obtained under the outward processing procedure when such processing confers foreign origin.

11. Statistical Value

- The statistical value is the value of the goods at the time and place they cross the border of the Member State of export, on export, and of the Member State of import, on import.

  For the purposes of intra-EU trade in goods statistics, the statistical value is calculated on the basis of the taxable amount and its equivalent, adjusted, where necessary, for the incidental expenses. Whenever the taxable amount does not have to be declared for taxation purposes, its equivalent corresponds to the invoice value, excluding VAT, or failing this, to an amount which would have been invoiced in the event of any sale or purchase.

  For the purposes of extra-EU trade in goods statistics, the statistical value is calculated on the basis of the value of the goods, adjusted, where necessary, for the incidental expenses.

- The value of the goods for extra-EU exports or imports is:

  (a) in the event of a sale or purchase, the price actually paid or payable for the imported or exported goods, excluding arbitrary or fictitious values;
  (b) in other cases, the price which would have been paid in the event of sale or purchase.

  The customs value is used if determined according to the Union Customs Code for goods released for free circulation including end-use.

- In the case of processing or other transactions that are not invoiced, the value of the goods for extra-EU exports or imports is determined on a gross basis as follows:

  (a) the value of goods with a view to processing, or in case of other transactions that are not invoiced, is the total amount which would be invoiced in case of sale or purchase;
  (b) the value of goods following processing is the value of goods with a view to processing plus the added value of the processing activity.

- The taxable amount and its equivalent for intra-EU trade and the value for extra-EU trade is adjusted, where necessary, in such a way that the statistical value contains solely and entirely the incidental expenses, such as transport and insurance costs, incurred to deliver the goods from the place of their departure:

  (a) to the border of the Member State of export, on export;
  (b) to the border of the Member State of import, on import.

- In the case of processing, the value of the goods for intra-EU imports or exports is determined as follows:

  (a) the value of goods with a view to processing is the total amount which would be invoiced in case of sale or purchase;
  (b) the value of goods following processing is the value of goods with a view to processing plus the added value of the processing activity.

- Under the Intrastat system, the statistical value is not provided by all the information providers. For those traders not liable to submit statistical value, this is calculated by the Statistical Service of Cyprus from the taxable/invoiced amount given in the return by the application of the adjustment coefficients.

12. Quantity measurement

The quantity of the goods is:

- ***Net mass***
  Net mass means the actual mass of the goods excluding all packaging.

- ***Supplementary units***
  Supplementary units mean the quantity other than net mass, according to the Combined Nomenclature in force during the reference period.

  In this publication, the supplementary units applicable are indicated on page 28.

13. Reference period

- ***Intra-EU trade***
  The reference period is defined as the calendar month of import or export of the goods.
- ***Extra-EU trade***
  The reference period is the calendar month in which the customs authorities accept the declaration.

14. Grouping of countries

In the detailed tables, countries are arranged in two groups:

a) EU countries, which include Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and countries and territories not specified within the frame of intra-EU trade and,
b) Non-EU countries, consisting of all other countries not included in the above group, including countries and territories not specified within the frame of extra-EU trade.

15. Quality of detailed data

Every reasonable effort is made to identify and correct errors received in the data, particularly the more serious errors. The control and correction of errors involves both manual and electronic means.

16. Abbreviations

A list of the abbreviations used throughout the volume can be found on pages 24-27.

17. Rounding on figures

Because of rounding, there may be slight discrepancies between the totals shown and the sum of the constituent items in summary tables.
