## **METHODOLOGICAL NOTES**

### **Definition**

**House Price Index (HPI)** is a quarterly index which measures the change in the average prices of residential dwellings. It captures all types of residential properties, both new and existing. The land component of the residential property is included.

### **Data source**

The data source used for both, indices and weights, is the Department of Lands and Surveys, Ministry of Interior. The data cover all areas which are under the control of the government of the Republic of Cyprus.

### **Data compilation**

The data are stratified into two strata; old and new dwellings. For each stratum a rolling window hedonic regression model is used in order to calculate the sub-indices. Then, the sub-indices are weighted based on the sum of the value of the properties of each stratum in the previous year.

### **Base year**

The base year is 2015=100.

### **Data revision**

Data are marked as provisional and are revised as soon as new information is available.
