PRESS RELEASE

INDUSTRIAL TURNOVER INDEX: JANUARY 2025

Annual Change +5,8%

In January 2025, the Industrial Turnover Index reached 128,1 units (base 2021=100), recording an increase of 5,8% compared to January 2024.

In manufacturing, the Industrial Turnover Index for January 2025 reached 126,8 units, recording an increase of 8,3% compared to January 2024. Increases were also recorded in mining and quarrying (+18,2%) and the water supply and materials recovery (+0,7%) sectors. A decrease was noted in the electricity supply sector (-4,2%).

METHODOLOGICAL INFORMATION

Scope

The Industrial Turnover Index reflects the monthly changes of turnover in the branches of mining and quarrying, manufacturing, electricity supply, water supply and materials recovery, that is, sections B, C, D and E of the statistical classification of economic activities NACE Rev. 2 of the European Union. The index does not include sewerage, waste collection, treatment and disposal and remediation activities, which are codes 37, 38.1, 38.2 and 39 of section E. The aggregated index is broken down to local market and export market index. The index is also compiled by main industrial groupings: intermediate goods, energy, capital goods, durable consumer goods and non-durable consumer goods.

Data Collection

The collection of data is conducted by the Statistical Service by telephone enquiries or e-mail. The data collection starts five to ten days after the end of the reference period and is normally completed within two months. The mining and quarrying sector covers all major quarrying products but not the support activities for the extraction of natural gas. For manufacturing, electricity supply and water supply and materials recovery all enterprises with turnover 2.000.000 euros and over, or with 20 or more employees are included in the survey and a sample is selected from enterprises employing less than 20 persons. For electricity supply and water collection, treatment and supply, data is also collected from administrative sources.

Compilation Method and Dissemination Practices

The Industrial Turnover Index is using 2021 as base year, meaning that it shows the monthly changes in turnover in relation with the monthly turnover average of the year 2021. In the base year, the average of the turnover indices for the twelve months is 100,0. For example, a monthly turnover index of 112,4 means that the turnover for the specific month has increased by 12,4% in relation to the average monthly turnover of 2021.

The aggregated Industrial Turnover Index is a weighted average of the turnover indices of the various sub-sectors of Industry, as determined in the statistical classification of economic activities NACE Rev. 2. The weights used are derived from the total sales of the enterprises in the base year (2021) and reflect the turnover of each sub-sector in relation to the total turnover of the Industrial sector.

The compilation of the Industrial Turnover Index follows the provisions of Regulation (EU) 2019/2152 on European business statistics. The Index is transmitted every month to the Statistical Office of the European Union (Eurostat).
