## **P R E F A C E**

The “Monthly Economic Indicators” is designed to bring together selected economic indicators so as to capture significant short-term developments in the Cyprus economy. This report is produced directly from a computerised information storage system.

As far as possible, monthly data are presented for the last twenty-five months, quarterly data for the last eight quarters, and annual data for the last three years. Data refer only to the Government controlled area, excluding the part of the island occupied by Turkish troops since July 1974.

This edition refers to the second half of 2009.

Most of the data are compiled by the Statistical Service. The indicators on the balance of payments, foreign exchange and the monetary sector are provided by the Central Bank of Cyprus and the Department of Co-operative Development. Part of the data on tourism is compiled by the Cyprus Tourism Organisation and the data on share price indices by the Cyprus Stock Exchange.

The co-ordination of the various series and the preparation of this publication were undertaken by Mrs M. Constantinou and Mrs A. Sofroniou, under the supervision of Mr G. Zeitountsian, Chief Statistics Officer, Head of the National Accounts and Foreign Trade Sections.

Sincere thanks and appreciation are extended to all government departments, semi-government organizations and private enterprises for their valuable assistance in providing the necessary data for this report.

## DEFINITIONS AND EXPLANATORY NOTES

### INDUSTRIAL

**Turnover Index of Industrial Sector:** It is compiled from the monthly turnover of a representative sample of enterprises. The weights given to the various industries are proportional to their turnover in 2005, derived from the Census of Industrial Production.

**Volume Index of Industrial Production:** This is a composite index of the volume indices of mining and quarrying, manufacturing, electricity supply, water supply and materials recovery, water collection, treatment and supply and materials recovery.

### MINING AND QUARRYING

**Volume Index of Mining and Quarrying Production:** The index is compiled from data on the production of minerals and quarrying materials obtained from the Mines Department and mining enterprises, supplemented with data from other sources. The weights utilised are proportional to the value of the various products at producer prices in 2005.

### MANUFACTURING

**Volume Index of Manufacturing Production:** It is compiled from data on the quantities of the main products manufactured by a representative sample of enterprises; in the case of heterogeneous products where no quantity measurement is possible, value indices are compiled, deflated by corresponding price indices. The weights given to the various industries are proportional to their value added in 2005, derived from the 2005 Census of Industrial Production.

### ELECTRICITY, GAS AND WATER

**Volume Indices of Production:** The indices are based on data on the billed consumption of electricity (i.e., excluding the amount of electricity supplied to the areas occupied by the Turkish invading forces), sales of gas, sales of the Water Boards and the quantity of water purified.

### ENERGY

**Sales of Petroleum Products** are compiled from monthly returns submitted by the petroleum companies. They include sales to industrial establishments, petrol stations, ships, aircraft, military forces, and others. Data for heavy fuel oil include also direct imports by the Electricity Authority and the cement industries. The cement industries also use coal partly in substitution of fuel oil.

**Electricity:** Data on the production of electricity pertain to the Electricity Authority of Cyprus only. They refer to gross production i.e. the amount of electric energy produced as metered at the output terminals of all sets in the

power stations. Consumption figures refer to the billed sales of the Electricity Authority.

## **CONSTRUCTION**

**Production Index:** The index measures the quarterly changes in production value at constant prices. It is based on a sample of enterprises active in the construction sector. For the calculation of the index and for every quarter the information collected is either work done, or turnover or hours worked by the production personnel (according to the enterprise) and this output measures are then deflated by the Output Prices index.

**Price Index of Construction Materials:** The price index is based on an extensive list of the main construction materials. The index measures price changes, which are compiled monthly from the main distributors or producers of construction materials. The weights of the various materials are proportional to their respective values at market prices in the base year 2005.

**Labour Cost Index:** The index measures variations in the average hourly labour cost for manual workers in the construction sector. Labour cost comprises the basic wage-rate, the cost of living allowance, and the employers' contributions to the Social Insurance, Medical, Provident, Holiday, Annual Leave with Pay, 56th Week, Redundancy and Industrial Training Funds. The index is compiled from data for the main occupations taken from the paylists of a representative sample of building contractors. The weights utilised for the compilation of the overall index are based on the wage-bill for the various occupations in April 2005.

**Output Prices Index:** The quarterly index measures the movements in prices charged to clients of construction work. It is based on a sample of enterprises and a list of various construction tasks for which unit prices are requested. It is used also as a deflator for the calculation of the Production index.

## **TRANSPORT, STORAGE AND COMMUNICATION**

**Turnover Value Index for Transport, Storage and Communication:** The Index covers Land Transport and Transport via pipelines, Water and Air Transport activities, Warehousing and Support activities for transportation and Postal and Courier activities. It is compiled from data obtained in a monthly sample survey, relating to the monthly turnover of the above activities. The weights allocated to the various activities are proportional to their turnover in 2005.

**New Registrations of Motor-Vehicles:** The data refer to both new and second-hand vehicles. License "A" is for heavy or light goods vehicles carrying loads for reward and License "B" refers to vehicles carrying loads for the owner's account.

## **DISTRIBUTIVE TRADE**

**Turnover Value and Volume Indices:** Turnover Value Indices are compiled from data collected in a monthly survey covering a sample of enterprises. The Indices are published for a selected number of activities according to the STS-Regulations. The weighting figure is the turnover of the activity measured by the Distributive Trade Survey of 2005.

Turnover Volume Indices of Retail Trade are calculated by deflating Turnover Value Indices of Retail Trade by a selected number of components from the HICP.

## **SERVICES**

**Turnover Value Index:** The index measures the monthly changes in turnover. It is based on a sample of enterprises active in the services sector. The turnover is collected from the enterprises monthly and the results are presented quarterly. The weights of the various enterprises are proportional to their output in 2005.

## **FOREIGN TRADE**

**Source of Data:** Foreign trade statistics with non –EU countries are compiled mainly from the electronic declarations made by the importers or their agents through the computerized system of Customs Authorities (Theseas System) (for imports) and the Single Administrative Document made by exporters or their agents (for exports). The statistics on trade with EU countries are compiled from the data received via Intrastat system and VAT returns.

**Total Imports** include all goods entered in the statistical territory of Cyprus either for free circulation or received into customs or excise warehouses from the rest of the world with the exception of simple transit.

**Imports for Home Consumption** include imports of goods from non-EU countries under special trade system and arrivals of goods from EU countries in local market either directly or withdrawn from excise warehouses.

**Total Exports** include exports of domestic goods (domestic exports) and foreign goods (re-exports of foreign goods).

**Domestic Exports** are exports of goods originating in the economic territory of Cyprus; if they have been wholly obtained in it or foreign goods, which were substantially transformed in Cyprus, so that the processing confers domestic origin. Goods originally imported and having undergone only repair or minor operations which leave them essentially unchanged are not defined as domestic. Minor operations include blending, packaging, bottling, cleaning, sorting, husking and selling.

**Re-exports (or foreign exports)** are exports of goods originating in the rest of the world, i.e not included in the economic territory of Cyprus and compensating goods obtained under the outward processing procedure when such processing confers foreign origin.

## **MONETARY AND FINANCIAL STATISTICS**

**Monetary Financial Institutions (MFIs)** are central banks, resident credit institutions and other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credits and/or make investments in securities.

**Monetary and Banking Statistics** cover the aggregated data of Monetary Financial Institutions (MFIs) which comprise all credit institutions operating in Cyprus, including Co-operative Credit Institutions (CCIs) former

International Banking Units (IBUs) and the Central Bank of Cyprus where applicable.

**Monetary Statistics relating to Co-operative Financial Institutions** are published, in addition to the statistics compiled by the Central Bank, in order to give a more complete picture of short-term developments in the monetary sector. The data are compiled by the Department of Co-operative Development.

## **PRICES**

**Consumer Price Index:** The index measures changes in the retail prices of goods and services consumed by private households. It is based on the price movements of a representative selection of goods and services. The prices of the various items are collected once a month, on a Thursday nearest to the middle of each month; fruit and vegetables are collected on a weekly basis (every Thursday), and rents on a monthly basis. The base year is 2005 and the weights are based on the results of the Household Consumption Expenditure survey.

**Price Index of Industrial Production:** The index aims to measure the variations in the average ex-factory prices of the main manufactured products sold in the home market and exported. It is compiled from data on the prices prevailing as on the first Thursday of each month (excluding discounts, commissions and excise duties), obtained from a representative sample of manufacturers. The weights of the various industries are proportional to their output in 2005.

## **LABOUR**

**Employment** data are based on the results of a quarterly survey covering all establishments employing 30 or more persons and a rotating probability sample of establishments employing up to 29 persons. They refer to the number of persons employed during the month who work either on a full-time or part-time basis. The data include working proprietors and working partners, unpaid family workers, and persons temporarily absent from work, eg. on sick leave, casual leave or vacation.

**Registered Unemployment** comprises all persons who are registered as unemployed at the District Labour Offices on the last day of each month, and are currently available for work. It includes persons receiving unemployment benefit under the Social Insurance Scheme as well as those not entitled to any benefit.

## **UNEMPLOYMENT FROM THE LABOUR FORCE SURVEY**

**Unemployed:** Persons aged 15 years and over who comply to the following standards:

- Neither worked nor had a job from which they were temporarily absent during the reference week.
- They had actively sought for work, i.e. had taken specific steps during the previous 4 weeks to find work
- They were available to start work within the 2 weeks following the reference week

and/or,

- Persons who neither worked nor had a job from which they were temporarily absent, but found a job which will start within a period of at most 3 months
- They were available to start work within the 2 weeks following the reference week.

**Labour Force:** The total number of the employed and unemployed persons aged 15 years and over.

**Unemployment rate:** The number of unemployed persons of any age group expressed as a percentage of the labour force in the same age group.

## **TOURISM**

**Travellers:** Are all persons who pass through passport control at the ports and airports of Cyprus. The various categories of travellers are visitors, residents, and emigrants or immigrants.

**Source of data:** From 14.6.1991-May 1997, the statements prepared by airline and shipping companies were the main source of data for tourism and migration statistics. These statements provided information only on the total number of passengers on each flight/route. Thus from the second half of 1991-May 1997 data for most categories of travellers are based on estimations. As from June 1997 the figures for the various categories of travellers are based on the results of the Passenger Survey carried out at airports / ports by the Statistical Service.

## **NOTES ON THE TABLES**

### **Series presented in Seasonally Adjusted form and in their Trend form**

Certain series are presented in their Seasonally adjusted and Trend form. The Seasonally adjusted data is designed to correct the seasonal behavior of the series. But in view of the smallness and openness of the Cyprus economy, irregular or erratic disturbances can have a significant impact on the behavior of certain time series. Thus, in series where irregular component is important, the series are also presented in their trend form.

The seasonally adjusted and trend series have been derived from running the data through the Seasonal Adjustment Program of Tramo-Seats using the interface Demetra which is recommended by the Statistical Service of European Union.

Demetra provides the option to choose for each series under analysis, between two methods:

1. Methods based on econometric modeling of time series called as parametric methods and where the recommended method is Tramo-Seats.
2. Methods of an empirical origin called as non-parametric methods where the choice is X12-Arima (this method derived from a line passing via X11 and X11-Arima).

In the present edition, the data presented is the result from the use of Tramo-Seats program instead of X11 which was used in the past editions. The pass from the X11 to the Tramo-Seats method in this publication was driven by

two facts: the need of an upgrading of the program already in use and reasons having to do with consistency with other statistical data.

**Rounding** may lead to slight discrepancies between the sum of individual items and the totals in some tables.

#### **Currency Unit Used**

1 Euro (€) = 100 cents

#### **Changes in this issue:**

All seasonally adjusted and trend series are based on data resulting from the use of the TRAMO-SEATS program (instead of X-11 used in past editions), for consistency purposes with other statistical data.

**Graphs:** The graphs which are presenting the volume index of Manufacturing Production, the Building Permits, the Local sales of cement, the vacancies outstanding, the Foreign Trade and the Arrivals of travellers, are based on data resulting from the use of the TRAMO-SEATS program for the reason mentioned above. An additional change in this edition concerns the graph for Foreign Trade, in which two axes are being used.

1) MFI sector excluding the CBC.

2) For the year 2007, the data refer to interest rates applied by MFIs to deposits denominated in Cyprus pounds and in euro vis-à-vis households and non-financial corporations resident in Cyprus. From January 2008 onwards, the data refer to interest rates applied by MFIs to deposits denominated in euro vis-à-vis households and non-financial corporations resident in the euro area member states.

3) Including non-profit institutions serving households.

4) For this instrument category, new business and outstanding amounts coincide i.e. they refer to end-of-period.

5) For this instrument category, households and non-financial corporations are merged and allocated to the household sector, since the outstanding amounts of non-financial corporations are negligible compared with those of the household sector.
