PRESS RELEASE - REVISED

ANNUAL NATIONAL ACCOUNTS: FIRST ESTIMATE FOR THE YEAR 2024

Growth Rate 3,4%

The growth rate of the economy in 2024 is positive and is estimated at 3,4% in real terms (volume measures). At current prices, the percentage change in Gross Domestic Product (GDP) amounts to 6,6%.

Regarding the production approach for the estimation of GDP in real terms, the positive growth rate is mainly attributed to the sectors: "Hotels and Restaurants", "Information and communication", "Construction" and "Wholesale and retail trade; repair of motor vehicles and motorcycles", (Table 1).

METHODOLOGICAL INFORMATION

Scope

The GDP estimate for 2024, two months after the end of the reference year, is to provide the first estimate of the growth of Cyprus economy, while providing information on the main variables of the production, expenditure and income approach.

Compilation and Methodology

The GDP level in Cyprus is determined from the production and expenditure approaches, while the income approach is considered a residual item as concerns the operating surplus.

Annual National Accounts (ANA) are produced at current prices, volume measures and previous-year-prices, published and transmitted to Eurostat at two and nine months after the end of the reference year.

ANA are compiled in accordance with the European System of Accounts (ESA 2010) as defined in Regulation (EU) No 549/2013 of the European Parliament and of the Council of 21 May 2013.

Production Approach

The estimation of GDP is based mainly on the results of the annual economic surveys (SBS) and the quarterly Short-Term Statistics (STS) of the Statistical Service of Cyprus, administrative sources, Government Finance Statistics and any data adjustments according to the European System of Accounts 2010 (ESA 2010).

Expenditure Approach

The calculation of GDP is based on the statistics of the Private and Government Consumption, the Gross Fixed Capital Formation, the Changes in Inventories, the acquisitions less disposals of valuables and the external balance of goods and services (Exports minus Imports).

Income Approach

The calculation of GDP is the sum of income components for the total economy and it is comprised of the compensation of employees, taxes on production & imports less subsidies and gross operating surplus including mixed income.

Source of Data

In order to produce ANA estimates, the following datasets are used as input to the system of calculation:

- short-term economic indicators by activity,
- administrative data,
- annual business surveys,
- General Government Statistics,
- Private and Public Consumption,
- Gross Fixed Capital Formation,
- change in stocks,
- external balance of goods and services,
- price indices.
