PRESS RELEASE

ANNUAL NATIONAL ACCOUNTS: **REVISED DATA FOR THE YEARS 2022-2024 AND REVISED ESTIMATE FOR THE YEAR 2025**

Revised Estimate for 2025 and Revised Data for 2022–2024

According to the revised estimate of the Annual National Accounts, the growth rate of the economy for 2025 is estimated at **4,8%.**

At the same time, the National Accounts data for the period 2022–2024 have been revised to incorporate specific adjustments as well as annual routine revisions.

The economic growth rate for 2024 has been revised to **6,6% from 3,9%,** for 2023 to **6,0% from 3,6%,** and for 2022 **to 8,9% from 8,7%.**

Specifically, the total revision of national accounts for the years 2022-2024 relates to:

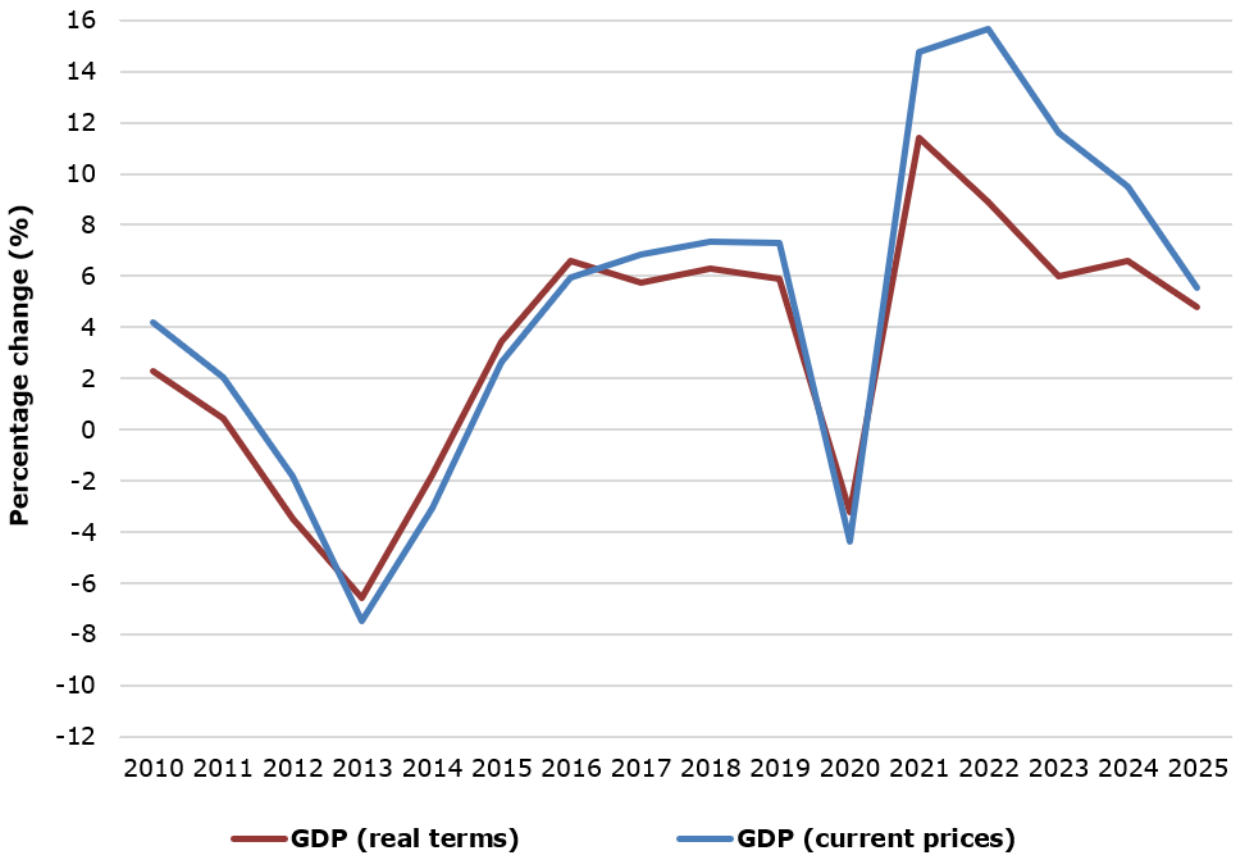

- Annual routine revisions from updated sources' data and completion of the balancing procedure of the Supply & Use Tables.
- Incorporation of large enterprises with significant turnover and cross-border transactions, following a thorough examination of their actual economic activity, the nature of their transactions, and the value added to the Cyprus economy.
- Incorporation of the households as producers of energy through photovoltaic systems.

METHODOLOGICAL INFORMATION

Scope

The scope of the GDP estimate nine months after the end of the reference year is to provide a better estimate of the growth of Cyprus economy, while providing information on the main variables of the production, expenditure and income approach.

Compilation and Methodology

The GDP level in Cyprus is determined from the production and expenditure approaches, while the income approach is considered a residual item as concerns the operating surplus.

Annual National Accounts are produced at current prices, real terms (base year 2019) and previous-year-prices, published and transmitted to Eurostat.

Annual National Accounts are compiled in accordance with the European System of Accounts (ESA 2010) as defined in Regulation (EU) No 549/2013 of the European Parliament and of the Council of 21 May 2013.

Production Approach
The estimation of GDP is based mainly on the results of the annual economic surveys (SBS) and the quarterly Short-Term Statistics (STS) of the Statistical Service of Cyprus, administrative sources, Government Finance Statistics and any data adjustments according to the European System of Accounts 2010 (ESA 2010).

Expenditure Approach
The calculation of GDP is based on the statistics of the Private and Government Consumption, the Gross Fixed Capital Formation, the Changes in Inventories, the acquisitions less disposals of valuables and the external balance of goods and services (Exports minus Imports).

Income Approach
The calculation of GDP is the sum of income components for the total economy and it is comprised of the compensation of employees, taxes on production & imports less subsidies and gross operating surplus including mixed income.

Source of Data

In order to produce ANA and QNA estimates, the following datasets are used as input to the system of calculation:
- short-term economic indicators by activity,
- administrative data,
- annual business surveys,
- General Government Statistics,
- Private and Public Consumption,
- Gross Fixed Capital Formation,
- change in stocks,
- external balance of goods and services,
- price indices.
