PRESS RELEASE

DATA UPDATE OF QUARTERLY NATIONAL ACCOUNTS

Growth Rate Q4 2025 at 4,5% (seasonally adjusted)

Quarterly National Accounts data at current prices for the year 2025 have been updated due to changes in Government Finance Statistics (GFS) and Balance of Payments Statistics (BOP). The changes in data in real terms are due to the incorporation of the balanced Supply and Use Tables 2022.

The GDP growth rate in real terms (seasonally adjusted), during the fourth quarter of 2025 remains positive at 4,5% over the corresponding quarter of 2024.

Regarding the production approach for the estimation of GDP, the positive growth rate is mainly attributed to the sectors: "Wholesale and Retail Trade, Repair of Motor Vehicles", "Information and Communication", "Hotels and Restaurants", "Construction". (Table 1)

METHODOLOGICAL INFORMATION

Scope

The scope of the GDP estimate 110 days after the end of the reference quarter, is to incorporate any changes from sources in order to update appropriately QNA data.

Compilation and Methodology

QNA are generally constructed using an indirect approach, which is based on short-term indicators providing information on the evolution of the phenomena under study. Furthermore, Chow-Lin's approach technique is used for temporal disaggregation.

The GDP level in Cyprus is determined from the production and expenditure approaches, while the income approach is considered a residual item.

QNA are produced at current, in real terms and previous-year-prices, published and transmitted to Eurostat at t+2 months. The flash estimate is obtained by running the same estimation procedure as the one applied for the t+2 months calculation however, with less input information available. It is calculated in real terms at t+45 days, published and transmitted to Eurostat as well.

QNA are compiled in accordance with the European System of Accounts (ESA 2010) as defined in Regulation (EU) No 549/2013 of the European Parliament and of the Council of 21 May 2013.

Source of Data

In order to produce QNA estimates, the following data are used as input to the system of calculation:

- short-term economic indicators by activity,
- administrative data,
- quarterly employment data,
- price indices.
